Motivations

Why use R

- Compute mean by hand?
- Complex operations in excel?
- Calculations repeatable?
- Pretty graphs?

Basic Terminology

mean_auc.R * get_wifi.R *

Go to file/function

Source on Save

Run

Source

```
1 # mean_auc.R
2 # (C) Brendan J. Herger
3 # Analytics Master's Candidate at University of San Francisco

Console

~/

Platform: x86_64-apple-darwin13.1.0 (64-bit)

R is free software and comes with ABSOLUTELY NO WARRANTY.
You are welcome to redistribute it under certain conditions.
Type 'license()' or 'licence()' for distribution details.

Natural language support but running in an English locale

R is a collaborative project.
Type 'contributors()' for more information.
'citation()' on how to cite R or R packages in publications.

Type 'demo()' for some demos, 'help()' for on-line help, or
'help.start()' for an HTML browser interface to help.
Type 'q()' to quit R.

> |

Convenient Functions

- `typeof()`
- `print()`
- `?function.name`
- `c("one", "two")`
- `paste("first", "second", sep = "")`
- `for (i in campaigns) { ... do something ... }`
- `rbind()`
- `cbind()`
- `apply()`, `sapply()`, `lapply()`
- `read.csv()`

Data types

- character
 - “hello world”
- factor
 - like character, restricted to set of options
 - ex: [“January”, “February” ...]
- numeric
 - 12, 12.5, 123456.7890
- logical
 - TRUE, FALSE
 - Must be all caps

For Loop

- SEE: `r_loop()` in `example.R`
- `for (item in list){`
 - `print(item)`
- `}`

Function

- SEE: `r_function()` in `example.R`

Data Frame

- SEE: `r_dataframe()` in `example.R`
- Functions:
 - `data.frame()`, `names`, `lapply`, `as.numeric`,
`as.character`

Case Study

Case Study

- I would like to:
 - Read in data
 - Look at data
 - Find some interesting trends
 - Make some interesting plots

Wrap Up

Moving Forward

- Hopefully now you know all the answers you will ever need
 - or at least how to Google them!
- R is an amazing tool. It can also be an amazing pain.
 - “Penny wise, Pound foolish” - if you take shortcuts, they will ruin you.
